Geolocation

Hardware has more than a few ways to detect your location:

- **GPS satellites**
- **GSM/CDMA cell IDs**
- **A-GPS**
- **Wi-Fi base stations**

Geolocation

```
if (navigator.geolocation) {  
    navigator.geolocation.getCurrentPosition(success, fail);  
}
```

```
function success(position) {  
    alert('Latitude: '+ position.coords.latitude +  
        ', Longitude: '+ position.coords.longitude);  
}
```

Device Orientation Events

DOM events for obtaining information about the physical orientation and movement of the hosting device

- Gyroscope
- Accelerometer
- Compass

Device Orientation Events

Events:

deviceorientation, devicemotion, compassneeds Calibration

```
if (window.DeviceOrientationEvent) {  
  window.addEventListener('deviceorientation', function(e)  
    a = Math.floor(e.alpha);  
    b = Math.floor(e.beta);  
    g = Math.floor(e.gamma);  
    el.style.transform = 'rotateZ('+a+'deg)  
                          rotateX('+b+'deg) rotateY('+g+'deg)  
    ... }, true);  
}
```

Vibration API

```
var vibrate = navigator.vibrate || navigator.mozVibrate;
```

```
vibrate(1000); // vibrate for 1sec
```

```
vibrate([1000, 500, 2000]);  
// vibrates for 1sec, still for 0.5 seconds,  
// and vibrates again for 2sec
```

Pizza Compass in JavaScript

1. Get location - `navigator.geolocation`
2. Use compass - `deviceorientation` event
3. Order a pizza - `tel:` URI scheme
